

GROW YOUR SPACE

YOUR TASK THIS WEEK IS TO GROW YOUR OWN SPACE. DO SOME RESEARCH INTO WHAT'S NEEDED TO CREATE YOUR OWN.

This week we would like you to design and then create a growing space. This could be raised borders, a patch of grass or even just a bucket of soil – it's up to you.

We would like you to pick a client and design a garden to suit their needs. Your choices are:

- Client 1 has just moved into Farnham in a small house with a large garden. She has plenty of space to grow but no idea what is needed, can you design some sections of land she can easily harvest?
- Client 2 has just moved into a flat, he has no garden but does have a balcony. He doesn't get a lot of light but the balcony gets the sun through the middle of the day. How can he grow something?
- Client 3 has moved into a house that's got a paved garden, no grass to be seen! Can you design some planters so she can grow fruits and veg?

I will provide a 'cheat sheet' on the things you will need to include as well as some ideas for things you could try to grow! Design it with aesthetics in mind – how can you make it look beautiful?

TO CHALLENGE YOURSELF can you find a way to repurpose something into a garden?
