BABOON ON THE MOON

ANIMATION

1 Once you have your baboon and set, it's time to look at creating! Set up the first scene and make sure everything is steady. Then take a photo.

2 Move the character a fraction of an inch to its next position, remember the more photos you take the smoother the movement will be! Then take another photo.

3 Keep going with this until you have completed your scene. Next step is to put these all together! This can be done in the iPhone app 'Stop Motion' or just on your computer. Then play through what you have done.

4 If you really want to challenge yourself, you can add sound at the end to bring the character to life!

If you have access to the 'Stop Motion' app you are able to take the photos, edit them together and add sound within the same application.
