

Name: _____ Date: _____

Weighing with cubes

Weigh objects using uniform non-standard measures

You will need:

- pairs of objects of a similar weight

10 cubes

6 cubes

3 cubes

5 cubes

What to do

- Draw lines to match each object to the number of cubes that would balance the object on a set of scales.

Work with your child to find pairs of objects that are similar in weight. Hold them in your hands and compare them. Ask questions such as: "Does one feel heavier?/lighter?" "Do they feel as though they weigh the same?" On the back of this sheet, ask your child to draw pictures of two items that weigh the same as each other.
