

# Rocket routes and space steps

Solve problems about place value

**Teacher's notes**

At the top of the page, children write the correct number on each blank star in the number lines, counting in twos for the first row, and in threes for the second row. At the bottom of the page, they complete each set of steps by writing in the boxes the missing numbers. Each set of space launch steps is part of a 1–100 number square.
